

3 a singular hand grip securely supported on the attachment in skewed
4 orientation with respect to the dissection device.

1 ~~23~~ 29. (New) The handle of claim 28, wherein the hand grip is positioned
2 above the tissue dissection device.

1 ~~24~~ 30. (New) The handle of claim 29, in which the hand grip is integrally
2 formed with the attachment.

3 ~~25~~ 31. A handle for a dissection device which has an elongated axis lying in
4 a plane, the handle comprising: an attachment to the dissection device; and
5 a hand grip supported on the attachment in an orientation out of the plane of
6 the elongated axis.

1 ~~26~~ 32. (New) The handle of claim 31, in which the hand grip is positioned
2 above the dissection device.

1 ~~27~~ 33. (New) The handle of claim 31, in which the hand grip is integrally
2 formed with the attachment.

1 ~~28~~ 34. (New) An apparatus comprising:
2 an elongated rigid tubular dissection device lying substantially in a plane;
3 an attachment to the dissection device lying outside the plane; and

4 a hand grip supported on the attachment in an orientation out of the plane of
5 the dissection device.

1 29 35. (New) The apparatus of claim 34, wherein the hand grip is positioned
2 above the dissection device.

1 30 36. (New) The apparatus of claim 34, wherein the hand grip is integrally
2 formed with the attachment to the dissection device.

1 31 37. (New) The apparatus of claim 34, wherein the attachment overlays a
2 proximal tubular portion of the length of the dissection device.

1 32 38. (New) The apparatus of claim 34, in which the [tubular dissection
2 device] includes a proximal end disposed to provide access to a lumen of the
3 tubular dissection device through the attachment.

1 33 39. (New) The apparatus of claim 34, in which the attachment includes a
2 portion thereof oriented substantially normal to the tubular dissection device near
3 a proximal end thereof; and
4 the hand grip is formed integrally with the attachment in skewed orientation
5 to said portion thereof.
